if condition_estatement: > code_to_run

again, using indentation to identify block of code

Condition estatement is a boolean expression, or a boolean variable

```
[7]: x=10
      if x>3:
          print('x is bigger than 3')
      else:
          print('x is not bigger than 3')
```

x is bigger than 3

```
[9]: myname='Victor'

      if myname=='John':
          print('option 1')
      elif myname=='Peter':
          print('option2')
      elif myname=='Victor':
          print('option3')
      else:
          print('no option')
```

option3

```
[11]: condition= 7>5
      print(condition)
```

True

```
[16]: if condition:
      print('condition is True')
      else:
          print('condition is False')
```

condition is True

```
[20]: # other conditions
      v=['ford', 'ferrari', 'bmw', 'Tesla']
```

```
mycar='Bentley'  
if mycar in v:  
    print('my car is in the list')
```

```
[22]: # other conditions  
x=105
```

```
if (x % 5==0):  
    print(x,'is divisible y 5')
```

105 is divisible y 5

```
[23]: # exercise.  
#print all the numbers from 1 to 100 that are divisible by 7  
  
for i in range(1,101):  
    if (i%7==0):  
        print(i)
```
